

Abstract

A system for enabling touch and feel over the internet provides a three-dimensional representation of a good being sold, that three-dimensional representation being viewable from a number of different directions. In one embodiment, the good being sold is in a package and the package is displayed from the number of different directions. Another embodiment has the good being a book, and the inside and outside covers of the book are displayed and specified pages of the book can be displayed. The user can read from either the label or the covers just like as if the were actually handling the good.
